

Hankmo Rotary Harrows

STARMIXER 6400 S

Superior performance

The superior performance and excellent cultivating features demonstrate the century – long know- how in soil cultivation. The range of Hankmo rotary harrows complies with individual customer needs.

More than one hundred years experience of European soil cultivation is available in today's modular Hankmo model range, providing working widths of 3,2 m; 3,8 m; 4,6 m and 6,4 m.

Less soil compaction

Sharp knives are penetrating easily into the soil and therefore there is less compaction than with many competing cultivating methods. Impressive cultivating performance makes it often possible to finish the field by a single pass, cutting also the compaction caused by the tractor wheels down to minimum.

Benefits of Rotary harrows

- simple and robust construction
- minor need of service, easy to do
- superior work output
- lower power requirement

Hankmo 320

HANKMO 320

Hankmo 320 is well known for its excellent features of mulching and mixing manure into the soil. The tillage power can be adjusted changing the angles of knife axles. Hankmo 320 is a good choice for a general tool for organic and light mineral soils. With extra weights it suits well for stubble cultivation of light soils, too.

Adjustable axle angles

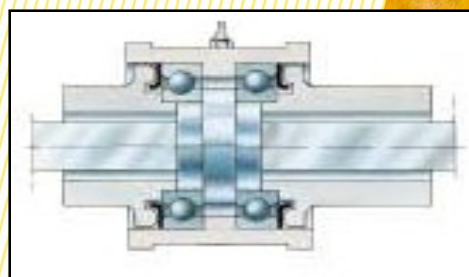

The tillage power of Hankmo harrows can be adjusted by changing the angle of knife axles. Steeper angle means more aggressive working of the cultivating layer. The optimum angle is depending on soil type, moisture conditions and driving speed.

Hankmo 4600 S with packer roller

High performance models 4600 S and 6400 S

Trailed, with three or four consecutive knife axles equipped Hankmo models are the best option for large farms, machine co-operation and contracting. A packer roller is optionally available for seed bed preparation.

Knife axle bearing construction in models 3800-4600-6400

4600 S ja 6400 S models are equipped with support wheels

Long knife Hankmo harrows – unbeatable in many cultivation tasks

Powerful autumn cultivation by three or four consecutive axles meets the environmental requirements of plant cover. Mulching and mixing of manure, compost and various soil materials into the soil goes efficiently and fluently by Hankmo. Even seed bed can be worked on stubble, ploughed land or minimum tillage. The long knife Hankmos can do a proper cultivation to a requested depth by a single pass. The work output is up to 10 hectares per hour with the biggest Hankmo models!
